

Humming Birds

Speaker: Brian Rollfinke, Ecologist, Educator and the Director of Education for Wild Birds Unlimited

**Thursday, September 3rd
7:00pm
Auditorium**

Hummingbirds are tiny, colorful birds known for their incredible flying abilities. They can hover in place, fly backward, and beat their wings up to 80 times per second. Found only in the Americas, these energetic birds feed primarily on nectar from flowers and play an important role in pollination. Despite their small size, hummingbirds have remarkably fast metabolisms and are among nature's most fascinating creatures.
