

Multicultural Committee Summer Presentation “The Giant Bears of Alaska”

**Thursday, August 6th
7:00pm
Auditorium**

Alaska is famous for its giant brown bears, some of the largest bears in the world. Thanks to abundant food sources like salmon, berries, and coastal vegetation, these bears can grow to extraordinary sizes, with large males weighing over 1,000 pounds. Despite their immense strength and stature, they are an essential part of Alaska's ecosystems, helping maintain healthy wildlife populations and nutrient cycles.
